

**PSO2 access system**

The catalogue has only those selected important parameters for your final decision. For project designs always ask for the user's guide for this product and any engineering consultation about possible uses.

**PSO2 access system**

The access system is used to control entry to buildings, restricting the access of people to certain areas, opening doors (in conjunction with an electric lock) without the need of having a physical key, garage entrance, controlling throughput equipment or electrically operated door locks, latches, revolving door barriers, door systems, gates, etc. throughput locks in **ESS systems**.

The PSO2 is used for identifying and controlling **Dallas Touch Memory™** or **Proximity 125kHz** contactless cards.

**Dallas Touch Memory** is an electronic chip that is encapsulated in a metal container that resembles a small battery. Thanks to its small but robust design, it can withstand rough handling. It can be worn on key chains, together with corporate ID cards, mounted on calling cards for visitors, etc.

**Proximity 125kHz** is an electronic chip molded in a plastic card that allows contactless identification only by proximity of the card to the reader. It is meant to be carried, for example, in the wallet.

The PSO2 meets the demands of increased security against attacks by decoupling the **reader slot** or **remote key readers** or **cards** from active and control parts (reader equipment).

The distance between the reader slot and the PSO2-M can be up to 20 meters, whereas remote readers can reach up to 1000 meters. The distance depends primarily on installation environmental and interference. Several readers can be connected in parallel to one system. An invasion of the reading equipment does not lead to a shutdown of the system, because the circuit board can be placed inside a secure area.

**Principles**

Placement of the **identification chip** to the **reader** transfers the information stored in it and the control mechanism compares it to the information stored in its memory. If the electronic code accepts it, the relay will be activated for the set time or the relay flip flops to the opposite position (according to preset function).

**Application**

The various combinations of PSO2 system and additional modules enable solutions with large-scale applications. The most common application is in the elevators of apartment buildings, see the back sheet. The combination of PSO2 and the remote reader system is a solution for hotel room systems for opening the doors to rooms using registered access.

**Specifications**

PSO2-M supply voltage	10-35V DC or 10-24V AC/50mA
PSO-RE8 supply voltage	10-30V DC or 10-22Vac/300mA
PSO-TINY-B supply voltage	10-35V DC or 10-24V AC/50mA
PSO-TINY-P supply voltage	10-22V DC or 10-16V AC/100mA
number of reading equipment	1-32, total number depending on the actual applications, cabling, exterior interference, ambient environment, etc.
Output contacts	Changeover contact relay 24V DC or 48V AC/1A (resistive load).
PSO-RE8 dimensions	89mm x 90mm x 60mm (w x d x h)
PSO2-M, PSO-TINY-B and P dimensions	36mm x 90mm x 60mm (w x d x h)
Cover	IP 20
Class of protection	SELV
Ambient temperature	-20°C to + 50°C
Weight	0.2 kg

The catalogue has only those selected important parameters for your final decision. For project designs always ask for the user's guide for this product and any engineering consultation about possible uses.

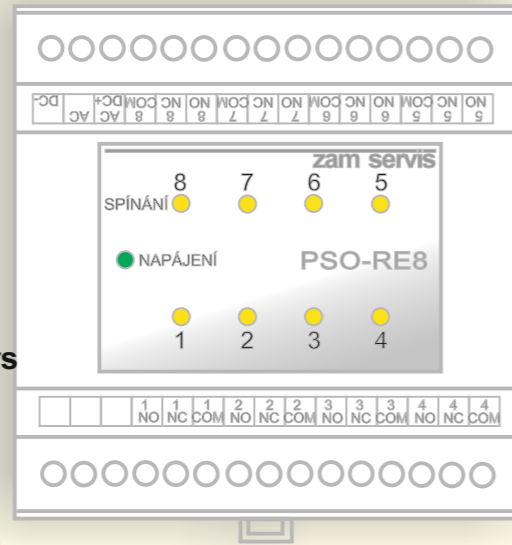

# PSO2

## configuration of components

### New parameters:

- Dallas contact chips
- Proximity contactless cards
- Memory for 510 chips
- 10V AC to 24V AC
- Connection for up to 16 relays
- Connection in a network with up to 32 readers
- Connection on one line up to 32 PSO2M4\_M
- Events memory up to 4,000,000 records
- offline and online mode
- Windows 98 to XP software

## PSO2 and additional components

Expansion module with eight programmable PSO-RE8 relays

PSO2-B expansion board with exchangeable events memory

PS2-I extension board

PSO2-M circuit board

## PSO2 for Dallas chips

up to 20m

Card slot

Elektronic chip Dallas

>1x

PSO2-M\_D M

## Communication with the PSO2 via the RS232

Cable connecting the PSO2 to the RS232

Cable connecting the PSO2 to the RS232

RS232 converter for USB

PSO2-M2\_M

PSO2-M2\_M

## PSO2 and the remote Dallas

up to 1000m

PSO2-M circuit board

PSO2-M\_R M

PSO-TINY-P remote key reader

Card slot

>1x

Elektronic chip Dallas

32x

## Communication with the PSO2 via the RS232

Rs485 converter for USB

Rs485 converter for the RS232

PSO2-M4\_M 32x

## PSO2 contactless system

up to 1000m

PSO2-M circuit board

PSO2-M\_R M

PSO-TINY-P remote key reader

Proximity 125kHz contactless card

32x

USB in PC

RS232 in PC
