

Programmable signaling device PST

Signaling device PST

Programmable signaling device PST telephone

Functions:

- Loudspeaker for communication with people near the beacon
- Voice message radio (preset / microphone)
- Automatic connection with preset lines (ALARM and DYSP functions)

Advantages:

- ✓ Can be used in operations with high levels of noise, dust and humidity
- ✓ Compatible with a wide range of telephone exchanges
- ✓ Wide range of adjustable functions
- ✓ ATEX certification

Programmable signaling phones PST type phones are designed for work in difficult industrial conditions (high humidity, noise, dust, explosion hazard). For group I, signaling devices are classified in category M1 and for group II in category 1.

The high volume of the call signal and the clearly visible optical signaling ensure efficient calling even in rooms with a high noise level.

The PST signaling telephones can be connected to any automatic telephone exchange via LPI line-separation modules (LPI-Z) or LPZ line modules together with intrinsically safe separation modules which have corresponding design features. Only cooperation with exchanges that are equipped with DTMF receivers is allowed.

Important note: Technical parameters of the PST may be changed. Please contact us for further technical advice and tailor-made solutions.
