

## Telephone connection system TSP

Telephone TIG-S

### Telephone connection system TSP for industrial operations

#### Advantages:

- ✓ Can be used in operations with high levels of noise, dust and humidity
- ✓ Compatible with a wide range of existing telephone exchanges
- ✓ Excellent call indication and good audibility
- ✓ ATEX certification

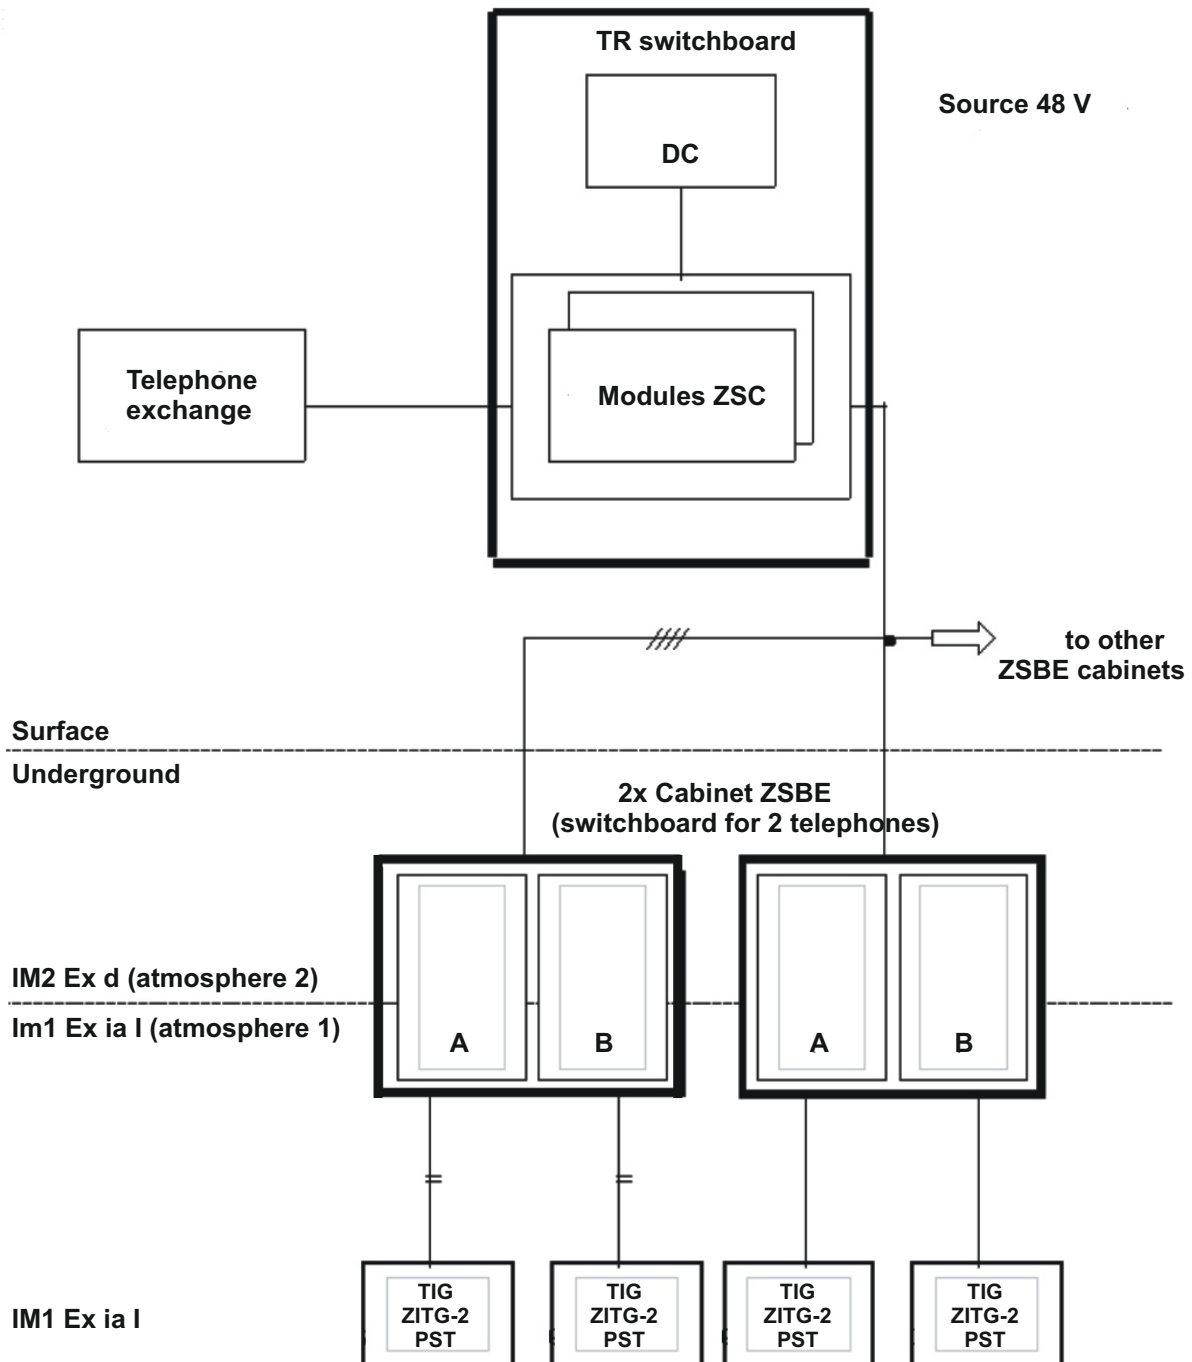

Equipment for telephone connection in heavy industrial plants of the TSP type. PST, TIG, TPN and ZITG-2 telephones are designed for environments with high humidity, possibly with dripping water, and a high incidence of dust (coal, stone), as well as PST, TIG and ZITG 2 telephones, which are designed for environments with a risk of methane explosion, in the design for deep mines and for environments with a risk of explosion in chemical plants.

The system is composed of any telephone exchange, TIG or PST telephones and a TPN industrial telephone set. For environments with a risk of methane explosion, the system is supplemented by a telephone line connection module of the ZSC type, located in a switchboard on the surface of the mining company and a galvanic separation module of the appropriate type.
